

DyreID[®] AS

Innovation in veterinary technology

ELECTRONIC PET PASSPORT

SECURED, VERIFIED AND AUTHENTICATED VETERINARY DATA FOR TRAVEL WITH PETS IN EUROPE

a EUROPETNET project

About DyreID

- Established 1994
- 100 % owned by the Norwegian veterinary association
- Our statutes defines our operations
 - Develop a diagnosis registry
 - Improve animal welfare
 - Provide funding for re-education for veterinarians
- Runs and operates the Norwegian database for microchipped pets
- Runs and operates the Europetnet database

Introduction to “Pyramidion” and the ePassport

- **The Pyramidion diagnosis registry has 3 core elements needed for the ePassport**
 - **Veterinary authentication**
 - **Pet identification**
 - **Storing of vaccination records**

PYRAMIDION

- Norway is the first country in the world where all diagnoses on all pets are gathered and collected in one registry.
- Core Principal: Veterinary authentication and pet identification
- Automatic transmission of data based on DyreID's API
 - Distribution to all clinics in Norway and Sweden
 - Agreement signed for Denmark
 - Currently integrated with more than 700 vet clinics
 - Distributed to 9 different practitioner management software providers

PYRAMIDION

- Big data - Facts and possibilities
 - Perform analysis based on
 - Species
 - Breed
 - Age
 - Geography
 - Tracing and disease control
 - Vaccinations
 - Diagnoses
 - Recent Example: outbreak of haemorrhagic diarrhea in dogs
- Core engine in the electronic passport system - ePP
 - Veterinary authentication- pet verification

Veterinarian w/ ID

Scans pet

Pet ID stored

Vaccination and
treatment is
performed

Data stored in
practioner
management
software

Current passport system

Manual writing
of data including
sticker, stamp
and signature

- ✗ No external authentication
- ✗ No external verification
- ✗ No central storing of data for lookup
- ✗ No central storing of passport numbers
